Quiz: Nano Harness and Agent Internals ▾

Quiz: Nano Harness and Agent Internals

[Copy page](#)

Test your understanding of agent loops, tools, and sandboxing.

- ☐ Call model → return result immediately
- ☒ Call model → parse Python code → execute with tools → observe → repeat until `final_answer()`

Correct! Correct! That's the core loop: model → code → execute → observe → repeat.

- ☐ Model returns JSON → parse → store in database → done
- ☐ Keep calling the model until it returns the word 'done'

[Submit](#)

You got all the answers!

- ☐ The model outputs English text like 'The answer is 42'
- ☒ The model outputs Python code that calls tools; agent executes that code in a sandbox

Correct! Correct! Model → Python code → execution → observation.

- ☐ The model outputs JSON which the agent parses
- ☐ The model outputs commands like 'list_dir' and the agent translates them

[Submit](#)

You got all the answers!

- ☒ The message history grows with every loop iteration (model output + observation)

Correct! Correct! Each step adds assistant response + user observation. History provides memory.

- ☐ The message history is cleared every step to save tokens
- ☐ The message history is stored in a database for later
- ☐ The message history doesn't matter; only the latest model output matters

[Ask HuggingChat](#)

You got all the answers!

- ☐ `safe_path()` allows reading any file on the system
- ☒ `safe_path()` prevents directory traversal by checking that paths stay within `WORKSPACE`

Correct! Correct! It resolves paths and ensures they're within the workspace.

- ☐ `safe_path()` is optional; security isn't really needed
- ☐ `safe_path()` encrypts paths for transmission

You got all the answers!

- ☐ `exec_cmd()` allows any shell command to run
- ☒ `exec_cmd()` maintains a whitelist of safe commands; anything else is blocked

Correct! Correct! Only safe commands like 'ls' work. 'rm' and 'curl' are blocked.

- ☐ `exec_cmd()` has a timeout to prevent hanging commands
- ☐ `exec_cmd()` runs commands with admin privileges

You got all the answers!
